

Eliminate the stress

Migrate your content securely to Microsoft 365

While content migration can seem like a daunting task that requires extensive planning, many organizations are prioritizing to strengthen their security posture and avoid data breaches. Often when organizations have multiple content repositories, it can be difficult and expensive to manually manage and update individual assets. Xillio Compliant Content Migration Solutions for Microsoft 365 help you navigate this challenge by automating content migration to SharePoint and offering compliance assessments and other consultancy services for Microsoft Purview environments.

Migrate content securely and in a compliant manner

Migrate content

Successfully migrate content from any ECM or CMS platform to SharePoint and archive historical data to Azure. Move only relevant content to the right place with the proper metadata.

Secure sensitive data

Synchronize content based on business rules and eliminate the risk of data loss. Align key stakeholder requirements, gain insights into content, optimize content for new environments, and train users properly.

Monitor risk

Maintain central logging and querying of audit activities for end users and administrators. Scan communication channels for sensitive or otherwise non-compliant information to protect company data.

Stay in compliance

Assess, implement, monitor, and govern compliance across all applications with Xillio and Microsoft Purview. Ensure critical information is managed according to your legal and regulatory requirements.

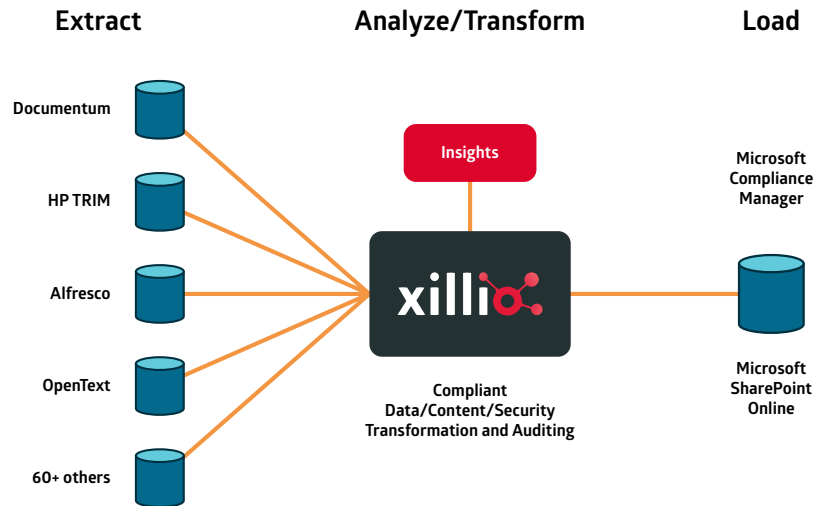

Microsoft Security

Xillio is recognized as a Charter Member of Microsoft Content Services Partner Program. With 18+ years of experience, 250+ happy clients, and 60+ connectors, Xillio is your partner for content migration software and services.*

End-to-end digital compliance transformation support

- Obtain software and services for single-instance, phased, or synchronized content migrations.
- Assess metadata for compliance risks.
- Leverage deep expertise with compliant content migration and compliance assessments.
- Gain insights into content and metadata to enrich and optimize it for a new environment with a user-centric process.
- Archive inactive content in Azure.
